

Lab Assignment: Semantic & Accessible HTML Data Tables

Project Overview & Instructions

Create a multi-page web project to display structured, accessible tabular data.

- **File Architecture:** Create a root project directory containing four distinct HTML files:
 - index.html (Site landing and navigation hub)
 - table-1.html (Exercise 1)
 - table-2.html (Exercise 2)
 - table-3.html (Exercise 3)
- **Navigation & Landmark Requirements:** index.html must utilize standard semantic structure (<header>, <main>, and <footer> tags) and provide accessible anchor links () pointing to each of the three exercise pages.
- **Separation of Concerns:** Write pure, semantic HTML. Do not use inline style="" attributes or deprecated presentation tags.

Student Exercises

Exercise 1: Core Grid & Accessible Headers (table-1.html)

- **Objective:** Construct a 3-row, 3-column course enrollment table using proper header orientation.
- **Table Data & Structure Requirements:**
 - Define the table container with <table>.
 - **Header Row:** Create a top <tr> with column headers for "Course", "Enrolled", and "Capacity" using <th> and scope="col".
 - **Data Row 1:** Row header "Java Enterprise" (<th scope="row">) with data values 28 and 30 (<td>).
 - **Data Row 2:** Row header "Relational Databases" (<th scope="row">) with data values 25 and 25 (<td>).
 - Include a navigation link back to index.html.

Exercise 2: Landmark Elements & Cell Spanning (table-2.html)

- **Objective:** Construct a 4-row, 3-column cohort enrollment summary utilizing structural landmark elements and grid spanning.
- **Table Data & Structure Requirements:**
 - **Caption:** Provide the table title "Cohort 2026 Enrollment Summary" using <caption> directly inside <table>.
 - **Header Landmark (<thead>):** One row containing column headers "Track", "Module", and "Enrolled" using <th> and scope="col".
 - **Body Landmark (<tbody>):**
 - **Row 1:** Track header "Full Stack" spanning 2 rows (<th scope="row" rowspan="2">), module "Enterprise Java" (<td>), and enrolled count 28 (<td>).

- **Row 2:** Module "Web Standards & CSS" (<td>) and enrolled count 30 (<td>).
- **Footer Landmark (<tfoot>):**
- **Summary Row:** Summary label "Total Active Seats" spanning 2 columns (<th scope="row" colspan="2">) and total count 58 (<td>).
- Include a navigation link back to index.html.

Exercise 3: Column Grouping & Multi-Metric Matrix (table-3.html)

- **Objective:** Construct a 4-row, 4-column curriculum and workload matrix utilizing structural column definitions.
- **Table Data & Structure Requirements:**
 - **Caption:** Provide the table title "Comprehensive Curriculum & Assessment Matrix" using <caption>.
 - **Column Grouping (<colgroup>):** Declare directly after <caption> with one lead column <col class="col-lead"> and one spanned metric column <col class="col-metrics" span="3">.
 - **Header Landmark (<thead>):** One row containing column headers "Module", "Duration (Wks)", "Lecture (Hrs)", and "Lab (Hrs)" using <th> and scope="col".
 - **Body Landmark (<tbody>):**
 - **Row 1:** Module header "Backend Systems & APIs" (<th scope="row">) with metric values 6, 60, and 120 (<td>).
 - **Row 2:** Module header "Database Architecture" (<th scope="row">) with metric values 4, 40, and 80 (<td>).
 - **Footer Landmark (<tfoot>):**
 - **Summary Row:** Summary header "Total Instructional Load" (<th scope="row">) with total metric values 10, 100, and 200 (<td>).
 - Include a navigation link back to index.html.
